

After Your Appointment

You may feel more hydrated, clear-headed, or energized, though results will vary from person to person.

Mild soreness or bruising at the IV site is common.

Care Tips:

- Keep the bandage on for at least 30 minutes.
- Drink water normally throughout the rest of the day.
- Eat a balanced meal or snack.
- Rest if you feel tired.

Call 911 or Seek Immediate Help If You Notice:

- Severe pain, swelling, redness, warmth, or drainage at the IV site
- Shortness of breath, chest pain, or palpitations
- Rash, facial or throat swelling, wheezing, or other allergic reaction symptoms
- Dizziness, fainting, confusion, or symptoms that do not improve

This information is general post-treatment guidance and is not a substitute for emergency medical care, diagnosis, or evaluation by a qualified provider.
